

U30 Remote Monitoring System - Cellular, Wi-Fi, HOBOLink Service Plans

Last updated 6/26/2008

These service plans provide 1 year of GSM/GPRS cellular data transmission and HOBOLink service for U30/GSM units and HOBOLink only plans for U30/Wi-Fi units. **The plans start on the day the U30 is manufactured.** 1 extra week is included in the first year of service to allow for time between when the unit is manufactured and received by the user.

U30/GSM Service plans are limited to the Maximum Cellular Data Usage per Month shown below. The Average Connection Interval and Alarms per Month are estimates of what you can expect in normal usage. If there are more frequent alarms or logger launches, these will reduce how frequently the U30 can connect. If the amount of cellular data left in a month gets low, a warning will be sent. If the data left gets too low, HOBOLink will automatically scale back the connection interval to once per day and turn off alarms. Normal operation will resume the following month.

U30/Wi-Fi HOBOLink only plans are priced according to the frequency of data uploads required.
