

ONSET INTRODUCES NEW WATER TEMPERATURE DATA LOGGER

BOURNE, MA, April 26, 2006 —a leading supplier of battery-powered data loggers for underwater monitoring applications, today introduced the HOBOWater Temp Pro v2, a new data logger for tracking water temperatures in a broad range of applications, from coral reef studies to stream habitat research.

The new logger features a highly-durable, polypropylene housing that is able to withstand years of use in fresh or salt water up to 50°C, and can measure and record water temperatures for more than one year before reaching memory capacity. Other features include:

- Compatibility with Onset's new HOBOWaterproof Shuttle for safe, convenient data transport
- Fast, reliable data offload via a high-speed optic-USB interface
- Depth rating of up to 400 feet

For plotting and analyzing water temperature data, Onset offers HOBOWare® software, a highly intuitive graphing and analysis software package for PC and Mac computers. HOBOWare provides a user-friendly graphical user interface and enables users to quickly and easily plot, analyze and print data files, as well as export data to spreadsheet programs.
