

NIST-SETUP

Setup Charge for NIST Traceable Certification

Call to order: 1-508-759-9500

Temperature point certification charge on a per-logger basis.

Important Information

NIST testing usually takes between 1-2 weeks.

onset CERTIFICATION OF ACCURACY

Onset Computer Corporation
470 MacArthur Blvd., Bourne, MA 02532
Tel: (508) 759-9500 FAX (508) 759-9100 www.onsetcomp.com

The reference instrument is calibrated traceable to NIST and certification is on file at Onset Computer's corporate headquarters in Bourne, MA.

Thunder: 2500ST-LT Serial # 9906157, last calibrated 01/07/2015 Onset Document # 836123
RTD Model: M2601HRTD-400, last calibrated 04/28/2015
DewMaster, Dewpoint Hygrometer, Sensor Model: D2, last calibrated 03/30/2015

‡ The System Test Accuracy is the sum of the product accuracy, the reference instrument accuracy, and the variability of the test chamber. PASS/FAIL is based on the Observed Accuracy which is the difference between the reference measurement and the observed measurement of the product being less than the System Test Accuracy. For RH the reference instrument accuracy of the dewpoint hygrometer is +/- 0.5% RH and the variability of the test chamber is 1.0% RH. For temperature the reference accuracy of the RTD is +/- 0.025° centigrade and the variability of the test chamber is .07° centigrade.

There is no statistical evidence to presuppose a drift of accuracy within this data logger and sensor while used within the specified operating environment. The user should evaluate the deployment conditions and project accuracy requirements to determine a reasonable confirmation interval. Otherwise, Onset recommends an annual recertification of accuracy.

Features

• Flexible Ordering

- Onset's NIST certification service allows you to choose the temperature points to be tested. Temperature points chosen must be within the operating temperature range of the data logger(s). For each temperature data logger to be certified, order the following:
 - Order one NIST Traceable Setup (NIST-SETUP).
 - Multiply the number of temperature points times the number of channels on the logger to be certified, and order this many NIST-TEMP-POINTS.
 - For example, an order for a 3-point NIST certification for a HOBO Temp at -10°C, +20°C, and +60°C, would include:
 - 1 x NIST-SETUP set-up charge @ \$51
 - 3 x NIST-TEMP-POINT (for 3 point times 1 channel) @ \$51 each = \$153
 - Total Cost: \$204

• Certifying Data Loggers You Already Own

- NIST traceable certification is also available for Onset temperature data loggers you already own at the same price as for new data loggers. Before returning a data logger for certification, please contact Onset's Technical Support Department for a Service Request Order (SRO) number. Onset can only accept data loggers that have a valid SRO number.?

• Certification of Compliance Also Available

- This certification states that the individual data logger is in compliance with its specification as described in its product manual and has passed all applicable test.
